Section 1: Technical Deep-Dive Hero

Headline (H1): The MCBuse Data Architecture: Structured Infrastructure for Low-Ticket Retail

Subheadline: Breaking down the 4 core software modules designed to bridge the gap between high-frequency micro-transactions.

Section 2: 2×2 Modular Component Architecture

System 1: Payment Capture

- QR/NFC stablecoin-compatible payment-event capture layer.
- Focus: Zero-friction tracking for ticket sizes between EUR 0.10–10.
- **Safe Line:** Regulated payment execution and settlement remain with licensed partners where required.

System 2: Business Analytics

- Automated merchant dashboards tracking daily sales rhythm.
- Focus: Transforming unstructured payment events into formal ledger history.
- **Safe Line:** Dashboard visuals shown publicly use sample or anonymized data only.

System 3: Credit-Readiness

- Internal data consistency analytics providing early risk indicators.
- Warning: MCBuse does not provide loans or credit scoring.
- **Safe Line:** MVP outputs are readiness indicators only, not a final regulated credit score.

System 4: Institutional Matching

- Structured merchant profiles prepared for potential future review by banks, fintechs, PSPs, or lending partners.
 - **Safe Line:** Matching means preparation, not guaranteed connection. Actual financial products and lending decisions remain with licensed partners.
-

Section 3: Product Flow — How It Works

Step 1 — Onboarding: Basic merchant profile + data consent capture.

Step 2 — Event Capture: QR/NFC payment event captured via MCBuse or partner flow.

Step 3 — Structuring: Each payment event becomes a structured transaction record.

Step 4 — Analytics: Transaction records become merchant-facing business insights.

Step 5 — Payout Visibility: Expected, completed, or delayed payouts tracked where available.

Step 6 — Credit Readiness: Internal consistency algorithms generate early readiness indicators.

Step 7 — Matching Prep: Merchant activity profile becomes ready for future institution review.
